WAVETAPE™

Video Head Cleaner

Patented WAVETAPE system for *full-width*
head cleaning

Non-abrasive and non-shedding

44-1229

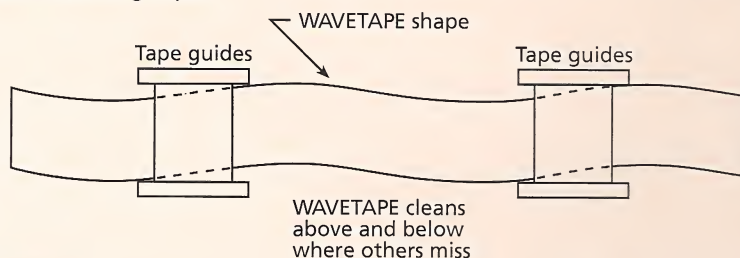

RadioShack®

Use the WAVETAPE after every 10 hours you use your VHS, S-VHS or digital VCR (or camcorder), and after every time you play a rental movie. During normal usage, damaging dirt collects just above the tape contact area, but not under the area contacted by the tape itself. Traditional cleaning tapes cannot reach and remove this dirt.

The WAVETAPE shape reaches above and below the normal tape path, gently and safely cleaning where the damaging dirt actually collects (an area missed by other cleaning tapes).

Instructions

Before using the WAVETAPE, rotate either spool until the tape pulls tight. Then insert the WAVETAPE into your VCR's cassette compartment and press PLAY on the VCR. Wait 10-15 seconds, then press EJECT on the VCR. **CAUTION:** Do not press FAST FORWARD or REWIND during the cleaning process. When the cleaning cassette reaches the end of the tape, rewind it for future use. Replace the cleaning cassette after 3 full uses of the entire cleaning tape (about 30-50 cleaning cycles).
